

Campus Regina Public – Advanced Construction

Our Advanced Construction Class focuses on the student's development within the construction sector. The students gain experience with hands on learning by building larger structures such as sheds and garages. The students will have opportunities to develop their skills with the DeWALT tools, that will prepare them for an easier transition from high school to Industry. Having the students use these tools on a daily basis teaches them how to safely use the tool and allows them to build confidence before they enter the workforce.

Thank You DeWALT for this amazing donation of tools to our Construction program.
